DEKU ~Stay Hydrate Together~
Shoichiryu Kozuki & skoz9778

FIrstly, I have started with setting up the lights. I have added point lights in three spots. First one is at top left of the bottle to light up the whole bottle. The second and third lights are placed at the bottom front to highlight the rainbow color. I have also added three spot lights to create the reality of the battery part.

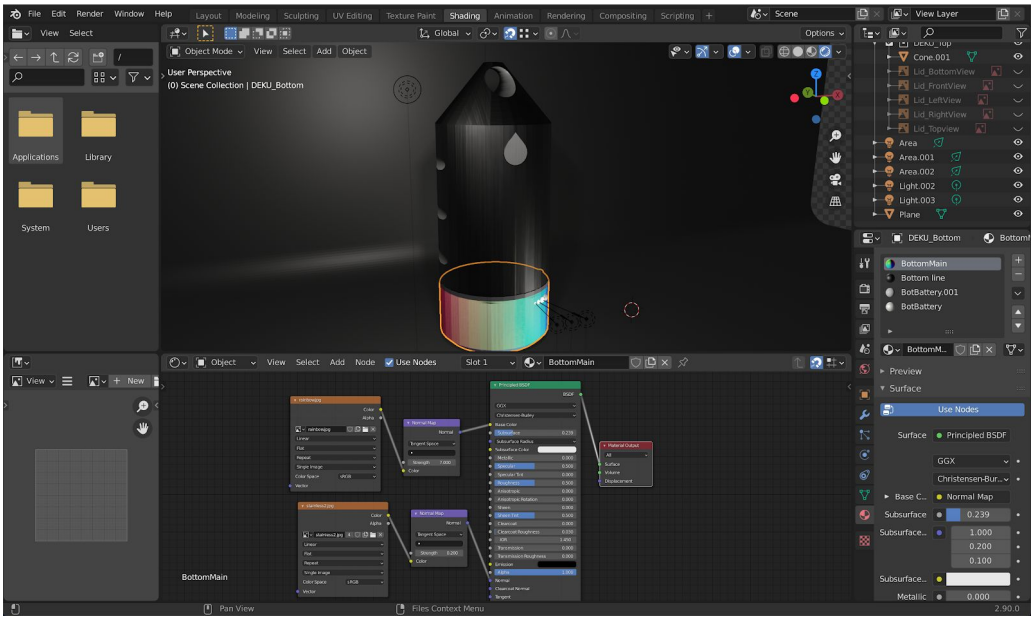

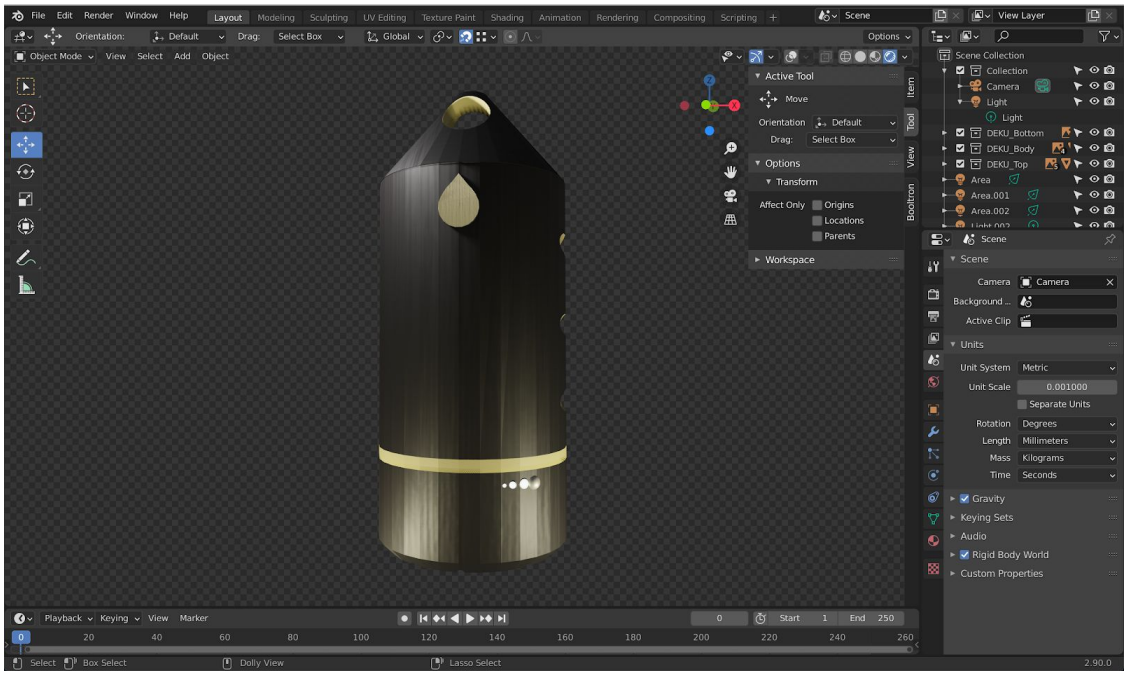

For the coloring of the bottle, I have added solid black with stainless texture to create the luxuriness of the bottle. For the logo, I have colored in gray to highlight the brand logo.

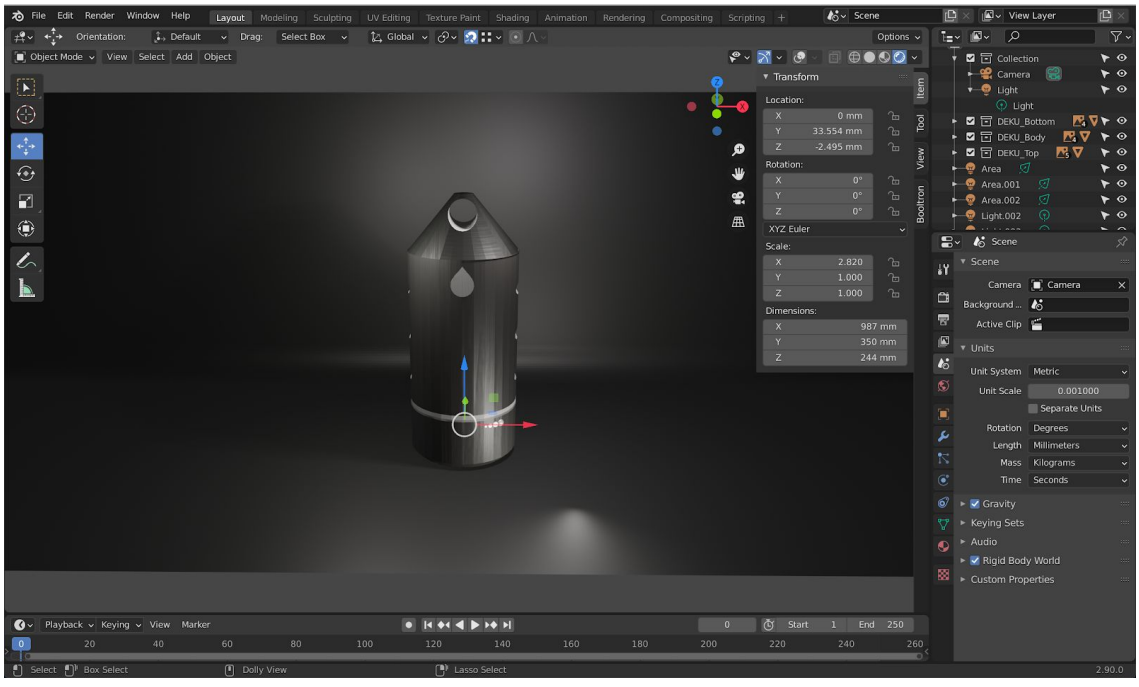

For the bottom part of the bottle, I have added the stainless texture just like the top and body part. At the same time, I have searched for rainbow texture and connected it into the base color so the customers are able to enjoy different colors by rotating the bottom part.

I have created two other versions within the same stainless texture. One is with gold and dark gray and one is with silver and dark gray. For both of the bottles, I have changed the color of the lights at bottom. I thought it could be better if I use the gold color for the gold version and silver for the silver version so the gold and silver will be more highlighted.

For the poster, I have used the smudge tool to delete the black part of the rainbow colored bottom. Used the gradation of black to white to show the luxuriness. I have also added a water drop picture in the background and lower the transparent to let people know that it is a water bottle. I have made the text 3D so it looks like it is popping out from the poster.
